PROBLEM - SOLUTION FIT TEMPLATE

=====

Problem Solution Fit Overview:

The project addresses delays and manual effort in classifying school IT helpdesk tickets. The proposed ServiceNow solution automates ticket categorization, keyword analysis, task routing, and user notification through an automated Flow Designer workflow.

Purpose:

- Automate incident ticket classification and reduce repetitive manual review by IT staff.
- Make category assignment and ticket status instantly visible to students, teachers, and IT support teams.
- Reduce human errors caused by wrong category selection or misrouted helpdesk requests.
- Create a consistent, automated workflow for school IT incident management.
- Improve turnaround time and overall user satisfaction through ServiceNow automation.

TEMPLATE SECTIONS

1. CUSTOMER SEGMENTS (CS)

- Primary: Students and Teachers submitting IT incident requests (Wi-Fi, projector, password, slow PC).
- Secondary: School IT support staff, system administrators, and helpdesk managers.

2. JOBS-TO-BE-DONE / PROBLEMS (JP)

- Students and teachers need technical issues resolved quickly without filling complex forms.
- IT staff need to process, categorize, and route daily incoming tickets consistently without manual review.

3. TRIGGERS (TR)

- Wi-Fi connection drops in classrooms.
- Projector failures during lectures.
- Forgotten passwords or locked accounts.
- Computer slowdowns or OS glitches on school hardware.

4. EMOTIONS: BEFORE / AFTER (EM)

- Before: Frustration due to delayed responses, confusion over ticket assignment, and long waiting periods.
- After: Satisfaction with instant ticket categorization, clear visibility, and faster issue resolution.

5. AVAILABLE SOLUTIONS (AS)

- Manual review and sorting of every incoming email or ticket by helpdesk staff.
- Paper forms or phone calls to IT support.
- These approaches involve repetitive effort, delays, misclassification, and frequent status follow-ups.

6. CUSTOMER CONSTRAINTS (CC)

- Limited IT support staff availability during peak hours.
- Strict school policies regarding data privacy and access permissions.
- Diverse technical issues requiring immediate attention without delay.

7. BEHAVIOUR (BE)

- Users submit tickets, wait for manual review, and call/email for status updates.
- IT staff manually inspect ticket details to determine category, priority, and assignment group.

8. CHANNELS OF BEHAVIOUR (CH)

- ServiceNow Service Portal / Helpdesk Interface.
- Automated email notifications.
- IT support task queues and dashboards.

9. PROBLEM ROOT CAUSE (RC)

- Manual review and classification of tickets creates a bottleneck, leading to delayed assignment, misrouted requests, and uncoordinated communication.

10. YOUR SOLUTION (SL)

- ServiceNow incident intake form combined with an automated Flow Designer workflow.
- Analyzes keywords in Short Description & Description fields to instantly assign Category, Subcategory, Priority, and IT Assignment Group.
- Triggers automated status notifications to requesters upon classification and status changes.
