

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date: 30 September 2026

Team ID: SWTID-2026-5117

Project Name: Auto Ticket Classification using Flow Designer

Team Leader: Kasturi P

Team Members: Jenitta S, Malarmathi K, Madhumitha P

Maximum Marks: 4 Marks

1. FUNCTIONAL REQUIREMENTS

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
--------	-------------------------------	------------------------------------

FR-1	Incident Ticket Submission	• Submit incident request by student/teacher
------	----------------------------	--

		• Enter user details & contact info
--	--	-------------------------------------

		• Enter Short Description and Description of the issue
--	--	--

FR-2	Automated Keyword Analysis & Categorization	• Trigger Flow Designer upon ticket creation
------	---	--

		• Analyze keywords in Short Description and Description
--	--	---

		• Automatically assign correct Category (e.g., Wi-Fi, Projector, Password, Performance)
--	--	---

-----+-----+-----

FR-3 | Automated Assignment & Routing | • Route ticket to the appropriate IT Support assignment group

| | • Assign priority based on category/severity

| | • Record automated routing details in the incident log

-----+-----+-----

FR-4 | Ticket Status Tracking & Management | • View real-time ticket status

| | • Update ticket status as IT staff works on the issue

| | • Provide visibility to students/teachers on ticket progress

-----+-----+-----

FR-5 | Notifications & Resolution Updates | • Send automated notification on ticket creation and classification

| | • Notify user upon status change or resolution

| | • Reduce repeated manual follow-ups by users

=====

2. NON-FUNCTIONAL REQUIREMENTS

=====

NFR No. | Non-Functional Requirement | Description

-----+-----+-----

NFR-1 | Usability | The submission interface and ticket classification feedback should be simple, clear, and intuitive for students, teachers, and IT support staff.

NFR-2 | Security | Student/teacher personal data and internal IT ticket details should be protected with appropriate ServiceNow access controls (ACLs) and secure workflow execution.

NFR-3 | Reliability | The keyword classification workflow should process every incident ticket consistently and maintain accurate records without dropping triggers.

NFR-4 | Performance | Keyword analysis and category assignment via Flow Designer should occur in real time (within seconds of submission) without performance delays.

NFR-5 | Availability | The automatic classification workflow must be continuously available whenever the ServiceNow platform is active.

NFR-6 | Scalability | The solution should easily handle a high volume of daily incident submissions and allow seamless addition of new keywords or categories as IT needs grow.
